PATENT 6296/CPI/L/B/PJS

ABSTRACT

A semiconductor processing chamber having a motorized lid is In one embodiment, the semiconductor processing chamber [0057] generally includes a chamber body having sidewalls and a bottom defining an provided. interior volume. A lid assembly is coupled to the chamber body and is movable between a first position that encloses the interior volume and a second position. A hinge assembly thereto is coupled between the lid assembly and the chamber body. A motor is coupled to the hinge assembly to facilitate moving the lid assembly between the first position and the second position.
